# FELCO 800 - FELCO 810

## THE ADVANTAGES OF LITHIUM-ION

Would you like the entire summer to be battery worry-free? Lithium-ion makes this possible! With the former technology, 3 to 4 recharges were needed throughout a season. Additionally, the memory effect does not impact on battery longevity.

## THE QUALITY OF FELCO CUTTING HEADS

With a million cutting heads produced per year and 30 million pruning shears created since 1945, FELCO expertise ensures perfect cutting quality, improved plant healing and decreased risk of infection guaranteed.

## THE ADVANTAGES OF THE DROP-FORGED ALUMINIUM FRAME

Thanks to the tool's natural balance, decreased tension of the forearm! The mechanical protection provided by the aluminum extends the motor life: boasting equal thickness, the drop-forged aluminium is ten times more resistant to plastic. The aluminium also allows for the diffusion of the heat generated by the motor during the cutting operation. The upside: less motor thermal restrictions and an extended life. What is more, the drop-forged aluminium frame has a lifetime guarantee.

## FELCOtronic

Light and ergonomic, the FELCOtronic makes cutting easier and faster. Discover effortless, intense cutting with FELCOtronic.

*"Thanks to the lightweight battery of the FELCO 800 and its great charging capacity, wave goodbye to tendonitis!"*

Ms. Berat Thevenet, Vandières, Champagne (France)

At Loubser Estate, 8 employees cut apple trees, pear trees and nectarine trees, which extend over 115 hectares. Up until recently, they only used manual tools to cut trees with heights of between 1.5 and 3 meters. In 2010, Production Manager, Dean Loubser, purchased a FELCO 810P. He is delighted with his investment: a statement he made when seeing productivity increase by 25%!

Loubser Estate Tulbach, Western Cape Province (South Africa)

*"In order to cut the 26 hectares which forms part of our property, in 2009, we equipped ourselves with FELCO 810. We use them for the vineyards, the olive trees and the apricot trees. With the FELCO 810, I rediscovered the joy of traditional cutting, becoming familiar with the handling and precision of the hand held pruning shears. Less tiredness! With the time saved using the FELCO 810, I was able to finish my season earlier...and I could afford to treat my family to a week's skiing holiday!"*

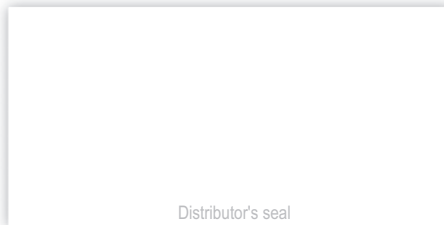

M. Hervé Bougnol, wine producer in Cabrières, Gard (France)
